

R 82 VE

Made of grey cast iron, they are designed to work on gate angle bars, assembly lines and other applications. They can be eventually used in common floors because, due to the machining and contact on flat points only, friction is decreased, making its movement easy on specific floors, where they achieve their highest efficiency. They are used in services with constant movement.

Hardness: 150 HB.

Color: Black.

Temperature range: from -40° up to 250° C.
